

WIFI SITE SURVEYS

Site surveys are essential. They're the foundations of a successful and effective wifi network.

A site survey makes sure you will be getting adequate coverage, signal strength and data throughput for the number of devices that will be connecting.

We guarantee our site surveys will give you perfect wifi.

BEST-IN-CLASS WIFI EQUIPMENT

With many companies offering wifi, how can you be sure of choosing a supplier who knows their Meraki from their Ruckus. Their Purple from their SocialWifi. And their Xirrus from their Fortinet.

Smart Wireless are business wifi specialists. We provide a guaranteed end-to-end service. We're not happy until you're happy.

INSTALLATION & INTEGRATION

Seamless and invisible. WLAN and public wifi. Indoor & outdoor coverage. Structured data cabling. All wrapped up with one easy-to-use network management dashboard.

We survey, supply, install, integrate and optimise a wifi network you'll be proud of, helping your people work more productively and your guests keep on wanting to come back.

DATA ANALYTICS

With cloud software enabled over your existing wifi network you can get access to a wealth of rich analytics.

You can see real-time footfall, passers by, conversion and bounce rates, dwell times, return visits and frequency; enabling your business to truly understand your customers.

You can also enable additional location services to pinpoint customer movement in venues down to a few metres. You can then send marketing messages to people as they move around your venue in real-time.
